Organizational Placement
Agency: Department of Environmental Quality
Division: Environmental Quality Commission
Program: Administration

Program Description
The Environmental Quality Commission is a five-member citizen panel appointed by the governor of Oregon for four-year terms to serve as the Department of Environmental Quality's policy and rulemaking board. In addition to adopting rules, the EQC also establishes policies, issues orders, judges appeals of fines or other Department actions, and appoints the DEQ director. The Administration program provides support to the EQC.

Agency: Department of Environmental Quality
Division: Office of the Director
Program: Office of the Director

Program Description
The Office of the Director provides leadership, policy formation and guidance, intra-agency and inter-agency coordination, and accountability for the agency. The Office of the Director provides support to the Environmental Quality Commission. Staff provides administrative review of Department actions such as the contested case process where hearings are conducted for controversial and significant matters such as permit issuance and denial, and rulemaking. The Office of the Director also manages administrative rulemaking and legislative liaison functions.

Edition: October 2022

Organizational Placement
Schedule number: 2008-0009
Agency: Department of Environmental Quality
Division: Office of the Director
Section: Office of Communications and Outreach (OCO)

Program Description
The Office of Communications and Outreach (OCO) provides public information, education and citizen involvement programs throughout the state. Services include: media relations; information on agency programs and initiatives; creating opportunities and venues for citizen involvement in DEQ permitting and rulemaking activities; responding to questions from the public (citizens, businesses, elected officials, local governments, interest groups, and educators) and news media; assisting with advisory committees, public hearings and other public meetings; conducting customer service surveys; and managing the Agency’s Web site. OCO outreach staff includes five public affairs specialists and one website coordinator. Staff works with DEQ's air, water and land quality staff to ensure that the public has information about DEQ's programs, ranging from how to get a car’s emissions tested to hearings on liquefied natural gas or local permit applications, to finding a contractor to remove asbestos. Staff also promote Agency initiatives such as waste reduction, recycling, healthy lawns without harmful chemicals, reducing toxics in the air and water, clean diesel programs for fleets such as school buses, household hazardous waste collection events, and the use of “plain language” in agency communications. Specialists are managed centrally in Agency Management but are directly funded by air, water or land quality programs; the web coordinator is budgeted in Agency Management. The program manages the agency’s administrative rulemaking.

Agency: Department of Environmental Quality
Division: Office of the Director
Program: Office of Compliance and Enforcement

Program Description
DEQ enforces the State’s environmental laws through the Office of Compliance and Enforcement. Budgeted in the Air, Water and Land Quality Programs and managed through the Office of the Director, the Office of Compliance and Enforcement provides enforcement guidance for field staff, and provides the formal enforcement response to those violations that are referred from DEQ's regional offices. Formal enforcement responses usually include the assessment of civil penalties or issuance of enforcement orders.

**Organizational Placement**

**Agency:** Department of Environmental Quality  
**Division:** Management Services  
**Program:** Accounting

**Program Description**

The Accounting program is responsible for the integrity of the agency’s finances. It consists of the following work units: revenue, payroll, expenditures, and purchasing and contracting. The program places emphasis on continually assessing financial risks to ensure that adequate internal controls are in place that ensure the accuracy of the information generated.

Revenue is responsible for: receiving, depositing, recording and monitoring payments made to the agency from all sources; assisting in collecting past due accounts; preparing and monitoring invoices for a variety of fees and other charges; reconciling cash accounts and fund balances for all fund types (General, Federal, Lottery, and Other); managing federal cash balances; preparing federal and state reports; providing year-end information for statewide financial statements; assisting federal and state auditors; and providing revenue information for budget and management decision making.

Expenditures is responsible for: establishing the proper accounting structure of funds, grants, activities and projects necessary to accommodate the agency’s accounting structure; ensuring the adequacy of internal controls; tracking expenditures and billing for cost recovery invoices; providing guidance to employees on the appropriateness of expenditures; reviewing, coding and paying all bills; auditing purchases; reimbursing employee travel claims and monitoring out-of-state travel; maintaining capital asset and other property records; providing ongoing support for the agency’s on-line time recording system; providing systems liaison between the Accounting and the Department of Administrative Services; filling and managing financial records; preparing all federal grant financial reports; providing year-end information for statewide financial statements and preparing the agency's own annual financial statements; and providing expenditure information for budget and management decision making.

Payroll provides payroll services for the agency, including maintaining payroll-related data for each employee so that all paychecks issued are accurate and timely; records and monitors all leaves; manages payroll issues related to terminations, garnishments, leave without pay, and payroll deductions; and ensures that all payroll-related legal requirements are met.

Purchasing and Contracting is responsible for: providing advice, guidance and oversight for writing personal service contracts and intergovernmental agreements; managing the solicitation and procurement processes for the acquisition of supplies, equipment and services; keeping all contracting and purchasing templates current; maintaining tracking systems for all professional service contracts, revenue agreements, intergovernmental agreements and pass-through grants; acting as liaison with the Departments of Justice and Administrative Services on all procurement issues; and providing training to agency staff regarding purchasing and contracting procedures.

Agency: Department of Environmental Quality
Division: Management Services
Program: Budget Office

Program Description
The DEQ Budget Office prepares the agency biennial budget and provides fiscal analysis of legislation and other proposals. The section also manages the execution of the budget, performs revenue and expenditure forecasts, works in partnership with the Accounting section to manage agency cash flow, and oversees fiscal and staff-hour databases for use by Agency managers. The section also manages bonds and the associated debt service, coordinates grant applications and processes, reviews financial assurance for landfills, and analyzes responsible parties’ ability to pay for cleanup costs.

Program: Tax Credits

Program Description
The Tax Credits program is responsible for managing relevant tax credit programs.
The program: reviews tax credit applications; reviews project plans, drawings, contracts, and costs; researches the facility’s pollution control capabilities; and inspects the facility. The program certifies sub-delegated facilities. For other facilities, DEQ presents its analysis and recommendation to the Environmental Quality Commission to approve or deny certification. The certification is the taxpayer’s evidence to the Oregon Department of Revenue that the taxpayer may use the credit to reduce its Oregon tax liability.

Agency: Department of Environmental Quality
Division: Management Services
Program: Health and Safety

Program Description
The Health and Safety Program establishes programs and practices to ensure a safe and healthy work environment for all employees. The section provides guidance and consultation to DEQ staff on a variety of Occupational Safety and Health issues. They perform job and program safety assessments and work to prevent accidents through hazard identification and abatement. They oversee safety training for the agency through a combination of direct classes and contracted classes. The Health and Safety Program also performs hazard analyses, and then coordinates, develops and helps implement emergency plans. The section has an active ergonomic program with over 100 ergonomic assessments being done a year for DEQ employees. They work closely with the vehicle inspection program identifying hazards and dangers vehicle inspectors may encounter in their daily work, including routine air monitoring for carbon monoxide. When an incident does occur, the section will investigate and analyze the incident to identify the root causes. The Health and Safety section also administers medical services contracts for DEQ employees who may come into contact with hazardous waste in the field and has developed some safety policies for the agency.

Agency: Department of Environmental Quality
Division: Management Services
Program: Human Resources

Program Description
The Human Resources program provides consultation and guidance to managers and staff, statewide, to ensure compliance with employment laws, policies and practices, and collective bargaining agreements. Human Resources implements recruitment practices to find qualified and diverse candidates for employment. The program ensures appropriate allocation of positions within the state’s classification system and manages reclassification and reallocation actions. Human Resources provides guidance and direction to managers on employee performance management. The program provides guidance on and tracks the use of various leaves, including leaves that qualify under the Family and Medical Leave Act, Oregon Family Leave Act, Disability leave, Workers’ compensation leave, etc. The program provides guidance and assistance on employee benefit selections, and assures compliance with the Americans with Disabilities Act Amendments Act in providing reasonable accommodations to employees with qualified disabilities. Human Resources provides day-to-day implementation of a number of employee education and training programs, career planning, mentorship, and internships.

Agency: Department of Environmental Quality
Division: Management Services
Program: Business Systems Development

Program Description
Business Systems Development (BSD) provides central information management governance policy and planning for the Agency, establishing Agency-wide data standards and system architecture and data exchange protocols. The section is responsible for choosing application platforms and development tools.

DEQ employs a wide range of information systems, most based on relational databases operating in desktop, client-server and web environments that are used to support both the ongoing functions of Agency operations as well as to provide information-based tools to better deliver DEQ environmental science-based services to our stakeholders and the public. Commercial “off-the-shelf” software does not effectively meet specific program needs of the specialized nature of DEQ programs. The Business Systems Development Section manages the new development, deployment, implementation, enhancement, modification and maintenance of the majority of those information systems. BSD also provides Agency-wide support for Geographic Information Systems (GIS) and web infrastructure. In total, BSD provides business solutions with system design, programming, and support for more than 80 program-specific applications ranging from simple desktop applications to fully integrated permit processing and specialized accounting applications (e.g., cost recovery management) which address processes unique in Oregon to DEQ.

Organizational Placement
Agency: Department of Environmental Quality
Division: Management Services
Program: Organization Improvement

Program Description
The Organization Improvement program oversees the development, implementation, tracking and reporting of agency performance measures and provides advice and facilitation services for agency planning efforts. Organization Improvement provides management consulting services agency-wide and guides the Executive Management Team and program management and staff on organizational and policy matters. Organization Improvement develops key strategic planning tools and facilitates the planning, development and implementation of performance measurement systems, Process Improvements, and agency-wide organizational change initiatives.

Organization Improvement supports DEQ’s efforts to maintain, enhance and restore Oregon’s environment by helping people connect resources, values and innovation to work practices. The program conducts strategic planning, the practice of identifying longer-range goals and objectives that define a road map toward a desired future state. The program also conducts operational planning, which develops and links shorter-term objectives, activities and resources to the Strategic Plan. The program’s organizational survey evaluates the degree to which DEQ puts its mission, vision and values into practice. The goal of Process Improvement activities is to periodically evaluate existing processes to ensure that the agency is operating as efficiently and effectively as possible. The program also coordinates meeting planning and facilitation.

Program Description
The Air Contaminant Discharge Permit (ACDP) program, authorized by ORS 468A.040-060, applies to construction of new and modified point sources of all sizes as well as operation of medium sized point sources that are not subject to Title V (see separate program description for Title V program). ACDPs are used to approve construction of major new sources of air pollution as required by the federal Clean Air Act. ACDPs are also used to meet requirements of the State Implementation Plan and to assure that a source does not inadvertently exceed Title V permitting thresholds.

ACDPs contain emission limits, control technology requirements, equipment testing and reporting requirements and, if needed, compliance schedules (see separate program descriptions for Technical Services, Emissions Inventory). Permits ensure that pollution reductions necessary to meet air quality objectives are achieved. The program’s activities include technical assistance, construction plan reviews, permit issuance and renewal, compliance inspections, investigation of complaints, pollution prevention recommendations and enforcement. The ACDP program requires ongoing rulemaking, policy and guidance development to incorporate changes to federal requirements.

Program: Gasoline Vapor Recovery

Program Description
The Clean Air Act requires EPA to set National Ambient Air Quality Standards (40 CFR part 50) for pollutants, such as ozone, that are considered harmful to public health and the environment. The Gasoline Vapor Recovery program is a key element of the Portland area ozone maintenance plan. The program has helped reduce smog-causing emissions from gasoline transfer and motor vehicle refueling sites in the Portland metropolitan area. The Gasoline Vapor Recovery program is operated in the regional offices. Activities include permitting, inspection and technical assistance to transfer and refueling site operators. In 2010, many of the program’s responsibilities will be shifted to the Air Contaminant Discharge Permit program as gasoline refueling facilities become subject to new federal standards for hazardous air pollutants (see separate program description for the Air Contaminant Discharge Permit program).

VAPORS
**Program Description**

The Open Burning program is authorized under ORS Chapters 468 and 468A.020. The program issues rules prescribing requirements for and prohibitions of open burning for every location in the state other than Willamette Valley field burning and slash burning administered under the Oregon Department of Forestry’s Oregon Smoke Management Plan. Open burning is regulated in order to restore and maintain the quality of the air resources of the state in a condition as free from air pollution as is practicable and consistent with the overall public welfare of the state. Rules for open burning are included in the State of Oregon Clean Air Act Implementation Plan as adopted by the Environmental Quality Commission. This State Implementation Plan (SIP) is adopted pursuant to the federal Clean Air Act (42 U.S.C.A. 7401 to 7671q).

Open burning within the state is administered by offices within the three regional divisions. Regional personnel are primarily involved with educational outreach, open burning permit issuance or denial, and enforcement of open burning rules. A good portion of this work involves ensuring that commercial open burning is properly managed and that prohibited material is not open burned within the state. Permits for open burning are issued generally during the spring and fall burning seasons. Any complaints regarding improper open burning that is related to pollution control is also handled by the regional offices. Many municipalities regulate open burning, and local fire departments occasionally perform similar duties.

### Organizational Placement

**Agency:** Department of Environmental Quality  
**Division:** Air Quality  
**Program:** Oregon Clean Vehicle Rebate Program

### Program Description

The Oregon Clean Vehicle Rebate Program (OCVRP) provides cash rebates to Oregonians who meet all of the program requirements at OAR 340-270. Certain types of vehicles, including battery electric vehicles, plug-in hybrid electric vehicles, zero-emission motorcycles and neighborhood electric are eligible to receive rebates. The OCVRP’s goal is to encourage higher adoption of zero-emission vehicles, which will in turn reduce air pollution and progress the state towards its greenhouse gas reduction goals. The OCVRP is currently set to sunset on January 2, 2024.

Information and Records Management Records (OAR 166-300-0030)
Program Description
DEQ operates two permitting programs to reduce emissions from point sources: the Air Contaminant Discharge Permit (ACDP) program; and the Title V Permit program. The federal Clean Air Act requires the Title V Permit program for operating major sources of traditional “criteria” or hazardous air pollutants.

Title V permits, which are part of the Clean Air Act State Implementation Plan (SIP), contain emission limits, control technology requirements, equipment testing and reporting requirements and, if needed, compliance schedules. Permits ensure that pollution reductions necessary to meet air quality objectives are achieved. Title V permits also contain enhanced monitoring procedures to help facilities improve and maintain compliance. Activities include technical assistance, construction plan reviews, permit issuance and renewal, compliance inspections, investigation of complaints, pollution prevention recommendations and enforcement. In addition, the Title V program requires ongoing rulemaking, policy and guidance development to incorporate frequently changing federal requirements.

Program: Air Quality Monitoring

Program Description
The Air Quality Monitoring program operates a statewide network of air quality monitors and samplers. These sites measure air pollutant concentrations for comparison to national standards, and collect weather and atmospheric data. The program also evaluates air monitoring plans submitted to DEQ, provides air quality data to other DEQ programs and interested persons, assists companies that have self-monitoring air quality programs, and regularly reports to EPA.

Program Description
The Environmental Public Health Tracking program is a joint effort between DEQ and the Oregon Department of Human Services (DHS), responsible for tracking environmental health threats. DHS receives federal grant monies through the National Institutes of Health, Centers for Disease Control and Prevention. The purpose of the program is to provide information from a network of integrated health and environmental data that drives actions to improve the health of communities by facilitating the study and monitoring of relationships among environmental hazards, exposures, and health effects.

The program makes environmental and health data available to the public. The Laboratory and Environmental Assessment Division originates and compiles the environmental data, which is sent to DHS for integrating with health data before it is made available to the public (see Laboratory and Environmental Assessment (LEAD)).

Program: Low Emission Vehicle (LEV)

Program Description
The Low Emission Vehicle (LEV) program is responsible for reducing greenhouse gas emissions that contribute to global warming. At the Governor’s request, LEV rules were based on California’s vehicle emission requirements and were developed in consultation with a broad-based stakeholder work group. The new rules will be phased-in between 2009 and 2016 and will only apply to new light and medium-duty vehicles. When the rules are in full effect, they will reduce greenhouse gas emissions from new vehicles while also reducing smog-forming and air toxic pollutants. DEQ is implementing the program by conducting outreach and providing technical assistance to regulated parties such as automakers, establishing compliance monitoring systems, inspecting dealers and regularly updating the program to match California as required by the Clean Air Act (see separate program description for the Indirect Source Permits program).

Program Description
The Clean Air Act requires EPA to set National Ambient Air Quality Standards (40 CFR part 50) for pollutants considered harmful to public health and the environment. The Particulate Matter State Implementation Plan (PM SIP) is comprised of individual plans for specific areas that have violated air quality standards for particulate matter. These attainment or maintenance plans detail the emission reducing control measures and their implementation schedule necessary to attain or maintain air quality standards for particulate matter and prevents significant deterioration of air quality in areas that are in compliance with the standards. Developing and updating the SIP is a public process carried out in close coordination with local governments, other state agencies, federal agencies, businesses, and public interest organizations. Tailoring the SIP to local conditions is critical to ensure that economic and air quality needs are in harmony.

Areas that violate air quality standards are classified as “non-attainment” areas by EPA. For these areas, the PM SIP program develops attainment plans to ensure the return of healthy air. Once an area attains the standards, the program develops a maintenance plan to ensure that the air will remain healthy to breathe for at least 10 years. The program can then ask EPA to remove the non-attainment classification.

Program: Regional Haze

Program Description

The Regional Haze program, under the provisions of the federal Clean Air Act and ORS 468A.550-620, is responsible for coordination with neighboring states and regional organizations in the West to reduce regional haze. To address the problem of regional haze, the federal Clean Air Act contains a Regional Haze Rule, which lists requirements to protect and improve visibility in national parks and wilderness areas. The U.S. Congress designated certain national parks and wilderness areas, including some in Oregon, as "Class 1 areas," where visibility was identified as an important value. Agricultural field burning is one source of pollutants that impair visibility (see separate program description for the Field Burning program). The Regional Haze Rule is intended to improve visibility in all Class 1 areas. States will be required to work together to improve visibility through interstate planning and implementation of regional strategies.

Program: State Air Toxics

Program Description
Through the Federal Air Toxics (National Emission Standards for Hazardous Air Pollutants (NESHAPs)) program, DEQ has been implementing federal technology standards to reduce emissions from major sources of air toxics. In this effort, the U.S. Environmental Protection Agency (EPA) adopts emission standards for categories of air toxics sources and DEQ ensures compliance with these requirements at individual facilities through the Title V and Air Contaminant Discharge Permit (ACDP) programs. To supplement federal efforts, the State Air Toxics program operates under a mandate from ORS 468A.025 to reduce exposure to and risk from other types of air toxics (see separate program descriptions for the Federal Air Toxics (NESHAP), Title V, and Air Contaminant Discharge Permit programs).

DEQ’s Environmental Quality Commission (EQC) adopted benchmarks for air toxics of concern in Oregon. Benchmarks are expressed as annual average concentrations that would protect human health during a lifetime of exposure.

To implement the state’s effort to reduce air toxics not addressed by the Federal Air Toxics (NESHAP) program, the State Air Toxics program uses a three-part strategy to address all the sources of air toxics. First is a focus on categories of sources or activities that emit air toxics statewide, like woodstoves, diesel engines, and open burning – otherwise known as sector strategies. Second is a focus geographically on communities where people experience the most risk, in our larger cities and highly populated areas – otherwise known as the geographic strategy (see separate program description for the Portland Air Toxics Solutions program). Third is an opportunity to address the rare case where pollutants from a specific facility are not fully controlled and pose problematic levels of risk to people living nearby.

Program: Clean Diesel

Program Description
The Clean Diesel program addresses one of the most potent air toxics to which Oregonians are exposed, diesel exhaust. Diesel engines emit a complex mixture of gases and particles that lead to elevated risk for cardiovascular and respiratory diseases including cancer, asthma and bronchitis. The objective of the Oregon Clean Diesel Initiative is to reduce excess cancer risk and other health effects that come from exposure to diesel. The program provides diesel fleet owners with grants and technical assistance for the installation of emission control technology, replacement of engines, scrapping old truck engines, and purchasing cleaner trucks. In addition to federal grants awarded by EPA, the program will begin managing funds from the VW Environmental Mitigation Fund as pass through grants in spring 2018.

Organizational Placement

Schedule number: 2008-0009

Agency: Department of Environmental Quality
Division: Air Quality
Section: Program Operations
Program: Point Source Activities
Sub-Program: Air Contaminant Discharge Permit (ACDP)

Program Description

The Air Contaminant Discharge Permit (ACDP) program, authorized by ORS 468A.040-060, applies to construction of new and modified point sources of all sizes as well as operation of medium sized point sources that are not subject to Title V (see separate program description for Title V program). ACDPs are used to approve construction of major new sources of air pollution as required by the federal Clean Air Act. ACDPs are also used to meet requirements of the State Implementation Plan and to assure that a source does not inadvertently exceed Title V permitting thresholds.

ACDPs contain emission limits, control technology requirements, equipment testing and reporting requirements and, if needed, compliance schedules (see separate program descriptions for Technical Services, Emissions Inventory). Permits ensure that pollution reductions necessary to meet air quality objectives are achieved. The program’s activities include technical assistance, construction plan reviews, permit issuance and renewal, compliance inspections, investigation of complaints, pollution prevention recommendations and enforcement. The ACDP program requires ongoing rulemaking, policy and guidance development to incorporate changes to federal requirements.

Program Description
DEQ operates two permitting programs to reduce emissions from point sources: the Air Contaminant Discharge Permit (ACDP) program; and the Title V Permit program. The federal Clean Air Act requires the Title V Permit program for operating major sources of traditional “criteria” or hazardous air pollutants.

Title V permits, which are part of the Clean Air Act State Implementation Plan (SIP), contain emission limits, control technology requirements, equipment testing and reporting requirements and, if needed, compliance schedules. Permits ensure that pollution reductions necessary to meet air quality objectives are achieved. Title V permits also contain enhanced monitoring procedures to help facilities improve and maintain compliance. Activities include technical assistance, construction plan reviews, permit issuance and renewal, compliance inspections, investigation of complaints, pollution prevention recommendations and enforcement. In addition, the Title V program requires ongoing rulemaking, policy and guidance development to incorporate frequently changing federal requirements.

INDUSTRIAL SOURCE AIR EMISSION INVENTORY (ISAEI)
TRACKING REPORTING & ADMIN AIR CONTAMINANT SOURCES (TRAACS)
Program Description
The Dispersion Modeling program is responsible for supporting the work of Air Quality programs by using dispersion models that mathematically represent the transport and diffusion of air pollutants in the ambient atmosphere. Typically, these are computer models which solve the mathematical equations and algorithms that simulate pollutant dispersion. The models are typically employed to quantify ambient concentrations of pollutants, determine optimal locations for ambient air monitors, estimate the relative contributions to concentrations from different sources, and develop emissions limits for new sources. The models also serve to assist policymakers in the design of effective control strategies to reduce emissions of harmful air pollutants. The dispersion models require the input of meteorological data, emissions estimates, and terrain characteristics.

Program: Emission Inventory for the Air Emissions Reporting Requirements (AERR)

Program Description

The Emission Inventory for the Air Emissions Reporting Requirements (AERR) program is responsible for regularly preparing emission inventories which measure air pollution (40 CFR parts 51 and 70). The emissions inventory provides base year emissions data. The program estimates emissions from permitted point, nonpoint (area), nonroad, on-road, and natural sources; and reports to EPA.

Program: Emission Inventory for State Implementation Plan

Program Description

The Emission Inventory for State Implementation Plan program supports development of regional State Implementation Plans (SIPs). The SIP emissions inventory directly supports agency decision-making, and is used by the Planning section to write SIPs. The objective of the emissions inventory is to provide a base year and a future attainment or maintenance year projected emissions data, for air quality planning purposes. Each inventory year includes annual, typical season day and worst-case day emissions estimates. The inventory encompasses emissions estimates from permitted point, area, non-road, on-road mobile, and natural sources. The inventory is included as an appendix of each SIP.

Agency: Department of Environmental Quality
Division: Air Quality
Program: Vehicle Inspection

Program Description
The Vehicle Inspection Program (VIP) is authorized by ORS 468A.350-455 to operate in the Portland and Rogue Valley areas to reduce air pollution in order to help meet federal air quality guidelines. In these areas, an emissions test is required when registering or renewing a vehicle with the Department of Transportation’s Division of Motor Vehicles (DMV). Vehicles are the number one source of air pollution in Oregon, and their emissions lead to high smog and carbon monoxide levels, which can have a variety of health effects.

Agency: Department of Environmental Quality
Division: Laboratory and Environmental Assessment (LEAD)

Program Description

The Laboratory and Environmental Assessment Division supports the Agency’s mission by providing scientific information through monitoring, laboratory services and data analysis. The Division is composed of seven Sections/Programs.

The Laboratory and Environmental Assessment Division (LEAD) Administration program provides oversight of the Division’s programs. The program’s responsibilities include policy development and legislative coordination.

The Quality Assurance program ensures that all environmental data generated, stored, reported, or used by the agency is of known and adequate quality to fulfill the needs of primary data users. The program implements rigorous quality assurance protocols during all phases of sampling and analysis.

The Air Quality Monitoring Section is responsible for statewide monitoring and sampling of Oregon's ambient airsheds, ensuring air monitoring equipment and activities are scientifically valid, and managing air monitoring data. AQM section staff collaborate with both internal and external environmental data users to develop air quality monitoring strategies that provide scientifically sound data, adhere to regulatory criteria, and meet the needs of stakeholders. The section also provides technical assistance in air pollution and meteorological measurement to multiple government and private organizations as well as the public.

The Inorganic Section identifies, quantifies, and reports the measurements of inorganic constituents in many sample types--water, wastewater, biological tissue, solids (e.g. soils, sediments, sludges, and air particulate matter), and mixed phases including oily wastes. Through its staff of chemists, the section provides expertise and technical assistance on inorganic environmental measurements and measurement systems. The section develops analytical methodologies for inorganic parameters.

The Organic laboratory section is responsible for providing technical support and organic analytical services to the different programs in the agency. Monitoring and analysis programs conducted by the DEQ Laboratory and Environmental Assessment Division provide the foundation for restoring, maintaining and enhancing Oregon's environmental quality. DEQ scientists maintain monitoring networks for air, water, and land, and conduct special studies to determine the status, trends and sources of impairment for Oregon's environmental quality. Monitoring data is used to determine whether environmental standards are being met, the sources of pollution, and the impact of pollution on human and environmental health.
The Resource Assessment & Technical Support (RATS) section supports the Laboratory's mission through a variety of different functions. These functions includes administrative support for the laboratory including oversight of purchasing, shipping, receiving and inventory control. RATS staff also manage the IT resources of the laboratory. Lastly, the resource assessment staff analyze data and prepare statewide water and air quality assessments.

The Water Quality Monitoring section is responsible for planning and implementing water quality monitoring work in support of the information needs of DEQ’s water programs, external partners, and the citizens of Oregon. Work involves collaborating with DEQ water programs and information stakeholders to identify monitoring locations and indicators, develop monitoring protocols, collect water sediment, tissue and habitat samples, evaluate data quality and analyze and interpret data.

Program: Ballast Water Management

Program Description
The Ballast Water Management program, authorized by ORS 783.620 to 640, regulates the discharge of ballast water, which is used to provide stability to shipping vessels. This practice may introduce aquatic invasive species into Oregon waterways, which can result in ecological, economic and/or human health impacts. The program requires advance notice reporting for the release of ballast water from regulated vessels. The program gathers data on shipping and ballast discharge trends in the state, as well as results from vessel inspections. The program provides coordination and staff support to the Shipping and Transport Aquatic Invasive Species Task Force, whose members are appointed by the DEQ Director. The program works closely with the other state agencies holding ex-officio member seats on the Oregon Invasive Species Council.

Program: Chemical Demilitarization

Program Description
The Chemical Demilitarization Program (CDP) oversees the day-to-day operation of the Umatilla Chemical Agent Disposal Facility (UMCDF). It is responsible for administering and enforcing state rules, federal regulations, and technical guidance documents at the Umatilla Chemical Depot (UMCD) and the Umatilla Chemical Demilitarization Facility (UMCDF) to ensure the appropriate storage, treatment and disposal of all chemical munitions, chemical agents and related wastes at the facilities.

The U.S. Army stockpiled chemical weapons at the Umatilla Chemical Depot, located near Hermiston. The stockpile consisted of chemical warfare agent in individual munitions, such as rockets and land mines, as well as bulk containers. All U.S. chemical weapon stockpiles must be destroyed under the international treaty known as the Chemical Weapons Convention. The Environmental Quality Commission (EQC) granted a Hazardous Waste Storage and Treatment Permit to the Army. The Army awarded the Umatilla contract to the Washington Demilitarization Company, and the Umatilla Chemical Agent Disposal Facility was established to carry out the work. UMCDF consists of two liquid incinerators to treat liquid agent, a “deactivation furnace system” to treat explosives and propellants, and a “metal parts furnace” to treat emptied munitions and other wastes.

The Chemical Demilitarization Program coordinates its efforts with other federal and state agencies. The Army’s Chemical Materials Agency is responsible for safely disposing of the nation’s chemical weapons stockpiles, at Umatilla and other sites in the U.S. The program ensures that the Army and its contractor comply with the hazardous waste and air permits issued by the State of Oregon. Oregon Emergency Management (OEM) is the lead state agency for emergency response. The Department of Human Services’ Public Health Division supports DEQ and OEM with toxicology expertise for emergency planning and health risk assessments. The U.S. and Oregon Occupational Health and Safety Administrations have joint oversight of worker safety issues at the Umatilla Chemical Depot.

Program Description
The Cleanup/Emergency Response program protects human health and the environment by identifying, investigating, and remediating sites contaminated by hazardous substances. The program both conducts investigation and cleanup at “orphan sites’ (sites without viable responsible parties) and oversees responsible parties cleaning up their own sites in Oregon. In this effort, the program requires responsible parties to clean up contamination from various sources, such as commercial and industrial facilities, petroleum tanks and contaminated sediments, which pose an unacceptable risk to public health or the environment. The program ensures that investigation accurately reveals the sources, nature, and extent of contamination. It assesses the risk that contamination poses to human health and the environment, evaluates and approves remedies, and implements the selected remedy or remedies. The program also manages information on each site and cleanup project, and works through all available avenues, including review and oversight of voluntary cleanups, technical consultation, and incentives to prospective purchasers, to encourage environmental cleanup and return contaminated property to productive use.

The program holds the official copy of cleanup site files that are commonly used in the Land Quality Division in general, by the general public, and by other DEQ programs. The Cleanup/Emergency Response program coordinates with other federal, state, and local governments to ensure that the environment and public health are not threatened by new releases of oil or hazardous materials. It implements and tests the DEQ Emergency Operations Plan. The program’s activities are performed by the following sub-programs: Emergency Response, Orphan Sites, Site Assessment/Brownfields, Site Response, and Voluntary Cleanup.

The Emergency Response program operates under ORS 465, 466, and 468B working with other agencies and industry to prevent and respond to spills of oil and other hazardous materials. It ensures that spills are stabilized or cleaned up. The program also coordinates removal and disposal of drug lab materials which would otherwise present a risk to the public, at which point the Oregon Department of Human Services is responsible for ensuring that the affected site is habitable.

The Orphan Sites program uses funds from public and private sources to clean up high-risk contaminated sites when responsible parties are not able to do so.

As the entry point into the Land Quality Division’s Site Response, Voluntary Cleanup and other high-priority cleanup programs; the Site Assessment/Brownfields program performs a critical "gatekeeping" function. The Site Assessment/Brownfields program examines sites where
releases of hazardous substances have occurred or may have occurred, to determine whether these sites may be threatening human health or the environment. It assesses all hazardous substances that can contaminate soil, surface water, sediments, groundwater, or air. Brownfields are vacant or underutilized properties where expansion or redevelopment is complicated by actual or perceived environmental contamination. The program can help remove environmental barriers to redevelopment of brownfields by providing assistance for the investigation of potentially contaminated properties and oversight during the cleanup of the properties.

The Site Response program works with responsible parties and other willing parties to investigate and clean up high-priority properties, and properties under enforcement actions. It works with property owners, tenants, contractors, and other willing parties on environmental cleanup, reviews work plans, provides technical assistance, and issues No Further Action (NFA) determinations for sites demonstrated not to present unacceptable risk.

The Voluntary Cleanup program encourages responsible parties to investigate and clean up contaminated properties, including those which pose a low risk to human health and the environment. The Voluntary Cleanup program offers two options for owners and operators of contaminated property to voluntarily investigate and, if necessary, clean up their sites: the standard Voluntary Cleanup Pathway (VCP), and the Independent Cleanup Pathway (ICP). The Voluntary Cleanup program works with property owners, tenants, and other willing parties on environmental cleanup, reviews work plans, performs preliminary assessment reviews, provides technical assistance, and issues No Further Action (NFA) determinations for sites demonstrated not to present unacceptable risk.

Agency: Department of Environmental Quality
Division: Land Quality
Section: Cleanup/Emergency Response
Program: Drycleaner

Program Description
The Drycleaner program operates under a mandate from ORS 465.500 to prevent future contamination from, and clean up historical contamination caused by, clothes drycleaning processes. The Resource Conservation and Recovery Act regulates the handling and disposal of hazardous wastes, such as solvents commonly used in drycleaning (see separate description for the Hazardous Waste section).

The program was created in response to concerns from the drycleaner industry that liability under Oregon law requiring responsible parties to pay for cleaning up contaminated property could put many individual dry cleaners out of business. Dry cleaners pay fees to a fund, the Dry Cleaner Environmental Response Account, to be used for cleaning up dry cleaning solvents at contaminated sites. Individual dry cleaners who pay fees will not be liable under Oregon law for the cost of cleaning up properties contaminated due to past practices.

Organizational Placement
Schedule number: 2008-0009

Agency: Department of Environmental Quality
Division: Land Quality
Section: Hazardous Waste/Tanks
Program: Hazardous Waste Administration

Program Description
The Hazardous Waste Administration program is authorized by ORS 465 and 466 to reduce generation of, and ensure safe management of, hazardous waste. The Resource Conservation and Recovery Act (RCRA)(P.L. 94-580, and 40 CFR 260-282), enacted in 1976, is the principal Federal law in the United States governing the disposal of solid waste and hazardous waste. The program is responsible for: focusing resources on areas with the greatest environmental needs, including geographic areas, priority business sectors and facilities; carrying out coordinated sustainability efforts for the hazardous waste program; ensuring statewide compliance with hazardous material laws and regulations; expanding partnerships to achieve greater success with program priorities; reducing the threat of exposure to hazardous waste through compliance monitoring and assistance, enforcement and permitting tools, and cleanup actions; reducing toxic materials use and hazardous waste generation through technical assistance, education and outreach, and compliance and enforcement efforts; and eliminating all chemical weapons and secondary wastes stored at the Umatilla Chemical Depot.

Agency: Department of Environmental Quality
Division: Land Quality
Section: Hazardous Waste/Tanks
Program: Heating Oil Tanks (HOT)

Program Description
The Heating Oil Tanks (HOT) program is authorized by ORS 466.858 to allow third-party certification of heating oil tank cleanups and decommissionings by DEQ licensed service providers. When a licensed contractor completes a cleanup or decommissioning, the company submits a certification to DEQ, which will then issue a letter to the tank owner registering the contractor's certification. The HOT Program also handles issues related to cleanup of leaks from heating oil tanks, contractors working on HOTs, and the voluntary decommissioning of HOTs. The licensing of individuals and businesses is conducted by the Underground Storage Tanks program (see separate program description for Underground Storage Tanks).

Records Retention Schedule

Edition: October 2022

Organizational Placement
Schedule number: 2008-0009

Agency: Department of Environmental Quality
Division: Land Quality
Section: Hazardous Waste/Tanks
Program: Underground Storage Tanks

Program Description
The Underground Storage Tanks program is responsible for oversight of underground tanks used for the storage of regulated substances (petroleum and designated hazardous substances) which are potential sources of environmental contamination and may pose dangers to public health. Hazardous Waste and Hazardous Materials removal or remedial action is addressed in ORS 465.200 through 465.455, and 465.990. Oil Storage Tanks are addressed in ORS 466.706 through 855, 466.994, and 466.995. The relevant federal citations are 42 USC 82(ix)(6991), 40 CFR 280.10 to 280.116, and 40 CFR 281.10 to 281.61. The program prevents leaks, detects leaks early, ensures that the tank owner has the financial resources available to pay for cleanup, and reduces or eliminates the risk from UST leaks. To perform its mission, the program: administers rules; registers tanks; evaluates service providers; inspects installations, facilities, operating systems, and tank removals; and oversees cleanup of releases. The program’s activities include operating a system for the prevention and reporting of releases from underground storage tanks, and taking corrective action to protect the public and the environment from releases from underground storage tanks. A separate program is responsible for Heating Oil Tanks (see the separate program description for Heating Oil Tanks program).

Program: Oregon E-Cycles (E-Cycles)

Program Description
The Oregon E-Cycles (E-Cycles) program is responsible for the statewide collection, transportation and recycling system for the convenient, safe and environmentally sound recycling of covered electronic devices, including televisions, desktop and portable computers, and computer monitors. The program provides convenient electronics recycling in every city with a population of 10,000 or more and in each county in Oregon. The collection and recycling system is financed by electronics manufacturers. The program is authorized by ORS 459A.300 to 459A.365, and is subject to a federal regulation adopted by the Hazardous Waste section (40 CFR Parts 260-262) (see separate description for the Hazardous Waste section). It is also subject to the provisions of 71 Federal Register 42928-42949 (July 28, 2006).

Program: Permitting and Compliance

Program Description
The Permitting and Compliance program is responsible for implementing the state and federal solid waste permitting program, Subtitle D of the Resource Conservation and Recovery Act (RCRA), the State Groundwater Quality Protection Rules, solid waste permitting requirements, and opportunities to recycle required to be provided at disposal sites.

The Permitting and Compliance program is responsible for regulating solid waste collection, storage and disposal. Permitted options include municipal and non-municipal solid waste landfills, transfer stations, treatment facilities, compost facilities, incinerators, material recovery facilities and sludge and land disposal sites. In addition, the program is responsible for overseeing the regulation of tire carrier and storage sites and for determining permit exemptions. Permitting activities include issuing new permits, renewal permits, permit modifications and addendums as well as terminating permits. Compliance activities for permitted facilities include inspections, review and approval of various plans, ensuring that plans are being followed, annual review of financial assurance mechanisms and cost estimates, and review of groundwater monitoring reports. Compliance activities related to non-permitted sites include complaint response and any subsequent enforcement taken to address any violation of rules.

Program: Waste Prevention and Impact Analysis

Program Description
ORS 459 and ORS 459A.010 define waste prevention and reuse as the top priority methods for managing solid waste, and establish waste generation goals. The Waste Prevention and Impact Analysis program reduces waste generation by implementing a Waste Prevention Strategy, evaluating the environmental impacts of materials, expanding partnerships to leverage waste prevention work, and increasing efforts to reduce purchase and use of products with high environmental impacts. The program prioritizes waste prevention projects and initiatives.

Program: 401 Hydro

Program Description
The 401 Hydro program operates under a mandate from Section 401 of the federal Clean Water Act, which requires that any non-federal power generators granted a federal license or permit to conduct an activity that may result in a discharge to waters of the nation must receive a water quality certification from the State where the activity will occur. Under this requirement, the 401 Hydro program is responsible for reviewing proposed or relicensed projects in Oregon, and issuing a 401 Water Quality Certification. The program works closely with the Federal Energy Regulatory Commission (FERC). The 401 Dredge and Fill program performs a similar function for dredge and fill activities requiring permits (see separate program description for the 401 Dredge and Fill program).

Program: Biosolids and Water Reuse

Program Description

The Biosolids and Water Reuse program regulates wastewater solids and domestic septage that have undergone sufficient treatment to allow its beneficial use as a soil amendment or fertilizer through land application (40 CFR 503). Biosolids and domestic septage are regulated through NPDES or WPCF water quality permits issued by DEQ. DEQ also reviews and approves biosolids management plans and issues site authorization letters. Additionally, DEQ works with domestic wastewater treatment facilities to assure biosolids are adequately stabilized and land application operations and management meet federal and state regulations. Monitoring and reporting of a wastewater treatment facility’s biosolids activities are required.

Water reuse for non-potable purposes allows municipalities and industrial facilities an option for managing treated effluent. State regulations require a water quality permit for this option and allow treated effluent to be used for beneficial purposes, most of which occurs through land application to crops and on golf courses. DEQ works with the Department of Human Services’ Health Services Division and Water Resources Department on the permitting of this practice. DEQ staff also work with municipal and industrial facilities to ensure proper operation and management of wastewater treatment facilities that pursue water reuse. Management plans for water reuse are required by a facility’s permit (see separate program description for Industrial and Domestic Permits program).

Program: Groundwater

Program Description
The Groundwater program operates under the provisions of the Groundwater Quality Protection Act (ORS 468B.167). The program protects against contamination of groundwater, which affects drinking water supplies, and may also have pronounced effects on surface water quality. The Groundwater program: conducts statewide groundwater assessments; implements Groundwater Management Areas where the water quality has been degraded in part from nonpoint source groundwater pollution; provides groundwater protection through water quality permits, and provides technical assistance to communities and watershed councils engaged in groundwater pollution prevention efforts.

Program: Underground Injection Control (UIC)

Program Description
The Underground Injection Control (UIC) program is responsible under the Safe Drinking Water Act, and administered under 40 CFR parts 141, 144, 145, and 146, for protecting drinking water sources and aquifers by providing oversight on the use of injection systems (dry wells, sumps, large onsite sewage systems, etc.) that discharge to the subsurface and may endanger groundwater quality. The EPA has delegated its authority to DEQ to keep an updated inventory of all injection wells and report back. In Oregon, the majority of injection systems are associated with storm water discharge (see separate program description for the Stormwater program). The program protects from contamination land that has been mapped by the Drinking Water Protection program (see separate program description for the Drinking Water Protection program). Owners or operators of injection systems need to obtain written DEQ approval to operate through qualifying as rule authorization, acquiring a state permit or properly closing the system.

Program: 401 Dredge and Fill

Program Description
The 401 Dredge and Fill program operates under a mandate from Section 401 of the federal Clean Water Act (33 USC 1341), which requires that any federal license or permit to conduct an activity that may result in a discharge to waters of the United States must receive a water quality certification from the State in which the activity will occur. The 401 Dredge and Fill program may issue or deny a 401 Water Quality Certification, which is a determination by DEQ as to whether federally licensed or permitted activities comply with the state’s water quality standards and other applicable programs. Examples of the types of projects that require a 401 certification include dredging, filling of wetlands for development, removal of dams, transportation projects and stream and wetland restoration projects.

The program collaborates with federal, state, and local agencies. The 401 Hydro program performs a similar function for hydroelectric power projects (see separate program description for the Community and Program Assistance section, 401 Hydro program).

Program: Priority Persistent Pollutants

Program Description
The Priority Persistent Pollutants (P3) program is responsible for developing a prioritized list of pollutants that affect the toxicity of Oregon’s rivers and streams, as part of its efforts to better identify and eventually reduce toxics in the environment. The program will report to the Oregon Legislative Assembly under the conditions of SB 737 (2007). Some, but not all, of the pollutants, have established water quality criteria, and therefore a clear connection with NPDES permits issued by the Water Quality Permitting program (see separate program description for the Water Quality Permitting program). Rulemaking will establish the “trigger level” at which pollutant concentration in municipal wastewater treatment plant effluent necessitates a Toxics Reduction Plan.

Section: Standards and Assessment
Program: Standards

Program Description

The Standards program is responsible for establishing water quality standards, benchmarks which assess whether the quality of Oregon's rivers and lakes is adequate for fish and other aquatic life, recreation, drinking, agriculture, industry and other uses. States are required to adopt water quality standards by the federal Clean Water Act, and submit their standards to the EPA for approval. The Standards program then acts to protect and restore water to meet the standards. The Standards program works to: conduct standards reviews and rule revisions to establish and update scientifically based water quality standards; identify water bodies not meeting water quality standards; and develop standards application policy and procedures.

BENEFICIAL USE MAPS
Organizational Placement
Agency: Department of Environmental Quality
Division: Water Quality
Section: Standards and Assessment
Program: 303d and 305b Assessments

Program Description
The 303d and 305b Assessments program is responsible for meeting requirements in Sections 303d and 305b of the federal Clean Water Act to assess water quality data and report to the EPA on the condition of Oregon’s waters. The Laboratory and Environmental Assessment (LEAD) conducts water quality monitoring and generates the data to be evaluated (see separate description for the LEAD Division). The 303d and 305b Assessments program then assesses whether Oregon waters comply with Oregon Administrative Rule 340. The program’s 303d List prioritizes those streams that do not meet water quality standards. Total Maximum Daily Loads (TMDLs) will be developed for some streams, while other streams will be addressed through water quality restoration plans (see separate program description for the Total Maximum Daily Load program). Other entities that utilize the program’s integrated assessment reports to determine whether water quality priorities are being met include: federal agencies, including the U.S. Forest Service, Bureau of Land Management, and Federal Energy Regulatory Commission; state agencies, including the Department of Forestry, the Department of Fish and Wildlife, and the Water Resources Department; and other Water Quality Division programs.

Program: Onsite Wastewater Management

Program Description
To protect land, water, and public health, Onsite Wastewater Management regulates siting and installation of individual onsite (septic) systems. Raw sewage from households and businesses is treated and disposed by connection to an area-wide sewer system or by installation of a septic system. Onsite Wastewater Management directly manages the program in certain “direct service” counties. The remaining “contract” counties manage the program under contract with DEQ.

Program Records
   (a) Retain summary reports permanently, transfer to State Archives after 10 years
   (b) Retain all other records 10 years, destroy
306 Onsite Program Review Reports
   Retain 10 years, destroy

Records Retention Schedule

Edition: October 2022

Organizational Placement
Schedule number: 2008-0009
Agency: Department of Environmental Quality
Division: Water Quality
Section: Surface Water Management
Program: Pretreatment

Program Description
The Industrial Pretreatment program requires communities with Significant Industrial Users or Categorical Industrial Users to develop and implement a management plan for controlling wastewater discharged from industries into publicly owned treatment works, (POTWs) (40 CFR 403). The purpose of the pretreatment program is to ensure POTWs with Significant Industrial Users establish a formal program to control pollutants which pass through or interfere with treatment process in the POTWs, or may contaminate sewage sludge.

Program Records

Program Description
The Stormwater program is responsible for implementing the provisions of the Clean Water Act and ORS 468B.050. The program administers and issues federal National Pollutant Discharge Elimination System (NPDES) permits for Municipal Separate Storm Sewer System (MS4) Permits and Construction and Industrial General Permits. As an EPA authorized program, DEQ’s NPDES permitting activities are subject to EPA oversight (see separate program description for the Water Quality Permitting program).

Program Records
314 Stormwater Permit Records
(a) Retain industrial and construction facility stormwater management plans subject to ongoing enforcement action until case is closed, destroy
(b) Retain all other industrial and construction facility stormwater management plans until superseded, destroy
(c) Retain permit development records, MS4 stormwater management plans, and MS4 annual reports, 10 years after superseded or obsolete, destroy
(d) Retain all other records, including those in existence at the time of permit coverage termination, 10 years, destroy

**Program Description**  
The Water Quality Permitting program regulates and minimizes adverse impacts of pollution on Oregon’s waters from pollution. The term “point source” generally refers to wastewater discharged into water or onto land through natural or human-made conveyances, such as pipes, culverts, ditches, catch basins, or other type of channel. These point sources operate under the terms of a federal National Pollutant Discharge Elimination System (NPDES) or state Water Pollution Control Facilities (WPCF) wastewater discharge permit issued by DEQ. There are three types of NPDES permits: industrial, municipal, and construction. The program also regulates and minimizes adverse impacts of pollution from non-point source activities.

To effectively protect water quality, the program: issues discharge permits that adequately evaluate and limit pollution to prevent an impact on receiving waters and the beneficial uses of those waters (drinking, swimming, fishing, aquatic habitat, etc.); inspects facilities and reviews monitoring results; takes prompt and appropriate enforcement actions when violations occur; and provides essential technical assistance for facility owners and operators to help assure ongoing compliance at minimum expense to permit holders.

Organizational Placement
Agency: Department of Environmental Quality
Division: Water Quality
Section: Watershed Management
Program: Drinking Water Protection

Program Description
The Drinking Water Protection program is a joint effort between DEQ and the Oregon Department of Human Services (DHS), responsible for promoting drinking water protection in Oregon by providing Source Water Assessments and technical assistance to public water systems and communities in the state. Per the Safe Drinking Water Acts Amendments of 1996, DHS receives federal funds, and then passes through funds to DEQ. The program completes Source Water Assessments for public water systems. The assessments give the water systems and the communities information on the watershed or recharge area that supplies the well, spring or intake (the “drinking water source area”) and identifies potential risks within the source area. DEQ provides technical assistance to water systems and communities by incorporating site-specific information derived through the Source Water Assessment process and developing management strategies for individual communities, developing outreach programs and tools, integrating drinking water protection with other agency programs, and working with local planning authorities to integrate drinking water protection areas into land use planning decisions.

The assessment reports identify potential sources of contamination and provide the basis for communities to develop plans for protection of their drinking water sources. The site-specific data and Geographic Information Systems (GIS) maps from the assessments are used to provide input into many other water quality protection efforts. This GIS data can be incorporated into land use planning, other program priorities, designation of special areas, etc., at the local, county, or state level. DEQ uses the information internally with a number of programs including spill response, household hazardous waste collection, hazardous waste cleanup, underground storage tank cleanup, and pollution prevention technical assistance, to focus on preventing the contamination of public water supplies.

SOURCE WATER ASSESSMENT
Organizational Placement

Agency: Department of Environmental Quality  
Division: Water Quality  
Section: Watershed Management  
Program: Nonpoint Source

Program Description

The Nonpoint Source program satisfies requirements in Section 319 of the federal Clean Water Act (33 USC 1251) for states to have nonpoint source (NPS) management programs based on assessments of the amounts and origins of NPS pollution in the state. Nonpoint source pollution comes from numerous diffuse sources such as runoff from roads, farms and construction sites. Federal grants cover the majority of costs for Oregon’s NPS program, which protects and restores both surface water and groundwater. The Nonpoint Source program passes through federal grant money to local organizations for nonpoint source projects such as public education and watershed restoration. The NPS program performs the following activities: characterization of NPS problems/concerns; monitoring; best management practices development and implementation; coordination with stakeholders; restoration activities; and public education.

Program: Total Maximum Daily Load (TMDL)

Program Description
The Total Maximum Daily Load (TMDL) program is responsible for meeting the federal Clean Water Act’s requirement to develop TMDLs, which are the maximum level of toxins that can be released into streams. In order to develop TMDLs, Total Maximum Load the 303d and 305b Assessments program conducts studies to determine the sources and loads of pollutants affecting the water body and how these vary over time and space. The 303d list is a list of these streams (see separate program description for Standards and Assessment, 303d and 305b Assessments). The TMDL program evaluates streams on the 303d list, and implements plans to clean up these streams. The program then obtains EPA approval of the TMDLs. The program assesses the condition of streams where fish populations are at risk to identify key limiting factors and determine water quality trends. The TMDL program collaborates with other state and federal agencies to collect and interpret water quality monitoring data. Local agencies and watershed councils have a key role in developing solutions, and the TMDL program provides scientific information for understanding water quality problems and developing successful management plans and TMDLs. The program is responsible for providing feedback through ongoing monitoring on whether Oregon is making progress towards restoring healthy watersheds.

Program: Total Maximum Daily Load (TMDL)
Sub-Program: Columbia and Willamette Rivers

Program Description
The Columbia and Willamette Rivers program is responsible for environmental oversight on two bi-state waterways, the Columbia and Willamette rivers. The program develops Total Maximum Daily Loads for bi-state waterways (see separate program description for TMDL program). The program also monitors litigation related to the bi-state waterways. The Columbia and Willamette Rivers program collaborates with the 401 Dredge and Fill program, performing Adaptive Management as part of the Columbia River Channel Improvement Program (see separate program description for the 401 Dredge and Fill program).
