LETTER OF TRANSMITTAL

To His Excellency, Earl Snell, Governor.

Complying with the provisions of Chapter 63, Oregon Laws 1923, the Postwar Readjustment and Development Commission submits its second biennial report, covering 1945 and 1946.

The unconditional surrender of Japan in August, 1946, following the unconditional surrender of Germany a few weeks earlier, brought the postwar era into sharp reality. Notwithstanding the wholesale cancellation of war contracts and the curtailment of shipbuilding and aircraft manufacturing, which separated an army of civilian workers from their jobs, Oregon was prepared to sustain the shock.

From May 15, 1943, the Commission had conducted a campaign to meet the exegencies arising at war's end. As a result many counties and municipalities had plans in blueprint and engineered for public works which would offer employment. Free enterprise also planned, having faith in Oregon and its future.

Today Oregon's covered pay roll is twice as large as in 1941, the prewar year, and covered employment is likewise twice as large.

Since V-J Day, 4,000 new concerns are under covered employment—an all time record total of 14,000.

How the workpile is distributed is shown in the statistical section of this report.

Respectfully submitted,

POSTWAR READJUSTMENT AND DEVELOPMENT COMMISSION.

PROJECTS EXCEED STATE VALUATION

Oregon's postwar projects, assembled by the staff of the Governor's Commission, equals the assessed valuation of the state in 1944.

These projects have a grand total of \$1,045,201,639.

Not included, however, is an estimated \$25,000,000 which will be spent on the 64,388 farms (a low average of \$400 per farm), nor the 55,500 housing units to meet requirements in a five year period. These units at \$7,000 represent an additional \$388,500,000. If these are added, the total postwar projects will exceed the 1944 state valuation by \$409,971,574.

In detail the program is presented by classification as compiled December 14, 1946.

Your Committee, in its contacts over the state with private enterprise, industry, and political subdivisions through consultation, education and planning has and will continue to promote full coordination of programs so as to prevent peaks of employment with public works bidding against industry which would surely be followed by valleys of unemployment or depressions. Thus the economy of the state will be stabilized and brought on a more even keel.

SUMMARY OF POSTWAR PROGRAMS

As Compiled by the

State Postwar Readjustment and Development Commission

Governmental Subdivisions		Estimated Cost
U. S. Army Engineers	\$	303,723,500

HINT OF THINGS TO COME

This report deals particularly with the development of Oregon, what is planned in projects and costs and what these expenditures mean for the State's future welfare and growth. It is a bird's-eye view of the dawning of a new Oregon, a hint of things to come.

The rehabilitation period came with V-J Day, August, 1945, and is still in effect. Reconversion has touched Oregon lightly and although thousands draw unemployment benefits (in Oregon and outside of the state), at the same time thousands of new jobs have been offered with no takers.

How the economy of the state has expanded since V-J Day; the attraction to Oregon of nationally known corporations and firms who have established branches and invested millions of dollars, giving employment in construction of plants, employing new workers, creating new pay rolls, developing the state's resources; the established firms expanding their plants, increasing their working force and undertaking new lines of manufacture, are revealed in the statistical tables.

It is not assumed that the construction program is complete; there has been difficulty in gathering data on building permits. An immense program of building is under way, involving industrial, commercial and housing outside of communities that issue permits.

Never before in the history of the state has there been accumulated such an imposing array of potential employment, nor has the state ever before experienced such a volume of construction of every character and type. For the first time the industrial east is spreading its activities in this state in a substantial manner.

Building records show that for every 200 population one new house required per year. During the war period of four years house construction was stopped. On this basis the state was 21,800 houses short of normal construction on January 1, 1946.

Using the estimated increase in population of 20 per cent, Oregon will require 6,540 houses per year. The next five years will require 33,700 houses and if the shortage is picked up in five years, we will build a total of 55,500 houses. Using the modest cost of \$7,000 per house, this will represent an expenditure of \$388,500,000.

Example: Shortage at end of war 21,800, plus five years requirements 33,700, total 55,500 houses. Estimated cost \$7,000 per unit equals \$388,500,000.

Building permits for new houses in 1946 (statistics vary incomplete) represent \$80,423,779, or at an average cost of \$7,000 there have been 11,489 houses started in municipalities where permits are issued. Outside of city boundaries, in the "fringe" where no records are kept, other thousands of dwellings have been undertaken, with unknown costs.

Oregon has 64,388 farms (not including 667 new farms, going in the Deschutes Reclamation Project). There is no way of checking roofs, buildings, barns, fences, etc., on the farmsteads and ranches, but a very low outlay of \$200 per farm for improvements will represent \$12,877,600. For betterments the Oregon farmer will spend not less than \$25,000,000. Between 1940 and 1945 the number of farms increased 2,439.

EMPLOYMENT

Oregon has not experienced great unemployment during reconversion as had been forecast during the war. Today there are 292,477 in covered employment, a peacetime high.

Predictions were made that when the shipyards closed there would be thousands of hungry and jobless people, presenting a formidable problem. In anticipation of an army of unemployed the state and its political subdivisions designed public works projects, accumulated sinking funds and many communities were prepared to activate their program on short notice. The public works, financed in whole or in part, will be found listed in this report in the section devoted to counties.

Contrary to expectations, the unemployment load was not unduly burdensome. The Unemployment Compensation Commission had ample resources in its trust fund of \$75,731,194 and met every approved claim. An estimated 40 per cent of migrant war workers from other states, returned home and have received \$2,500,000 benefit checks from Oregon. Housewives withdrew from the labor pool; elderly workers had their social security; young people resumed their schooling.

Heavy drains on the unemployment fund developed for a few months as shipyards closed, but net loss to the fund was only \$5,000,000 and then job openings rapidly appeared. Majority of the unemployed centered in Portland area and many of the job openings were in other parts of the state. Unemployed refused to leave the metropolitan area to go where work was offered elsewhere because of the housing shortage. This shortage was as critical in every community as it was in Portland. There has been little change in the situation and none can be expected before spring of 1947, by which time building materials may be more available.

Covered pay rolls for 1946 (data not yet available) are expected to be less than \$50,000,000 below 1945's \$704,000,000 which included \$178,000,000 shipyard pay rolls.

In brief, Oregon's covered pay rolls are twice as large as they were in prewar 1941.

Since V-J Day, 4,000 new establishments have come under the Unemployment Compensation Act. This is also an all-time high, in war or peace, of firms in "covered" employment—where not

less than four are on the pay roll. Total covered firms are now about 14,000.

Supplementing "covered" employment is the army of self-employed, such as farmers, lawyers, doctors, veterans who have opened repair shops for automobiles, motels, beauty shops, filling stations, food establishments, groceries, barbershops, etc.,—the long list of small enterprises where not more than one, two or three persons are on the pay roll, and state, county and city employees. There may be between 300,000 and 400,000 in this category, which can only be determined by a federal census. Last census in 1940, reported 238,227 self-employed.

With the passing of seasonal employment and the restrictions on construction, the winter months will see an increase in the unemployed, as is usual during the inclement months. Many of the jobless will have exhausted their unemployment benefits, especially those engaged in the ship construction industry. Following the winter doldrums there should be an abundance of work in house building and as various new industries get under way. In September and October, despite shortage of materials, there was also a shortagge in many towns of a sufficient number of building trades artisans to fill jobs.

Free enterprise is prepared to carry its share of the load of building a new Oregon. The innumerable private projects in process of construction, or prepared to start when restrictions are lifted, are all fully financed. Money is in the bank and has been accumulating there during the war years awaiting the postwar era of transition to be devoted to erecting every kind of structure from 13-story office buildings to hotels and industrial plants.

No one section of the state has a monopoly on the urge to have a building boom, nor are all industrial plants seeking to establish themselves in large cities. Important enterprises are locating outside of towns, in the forest areas and in the wide-open spaces. This spreading out of industry is a new phase in the development of Oregon and is much to be desired, for it broadens the employment possibilities, creates new communities and adds to the economic importance of others. Such development invariably calls for additional services from hospitals to laundries, from theaters to beauty shops.

Factors which are resulting in delay in the construction program are increased costs of labor and material and restrictions imposed by CPA until the veterans housing program is further advanced.

Costs have exceeded estimates based on 1941 prices, plus a normal increase. Many bids on public works have been rejected, being considered too high. Contractors submit proposals not knowing what materials are available or where they can obtain them, nor how long it will require to complete the job. All these are such

uncertain elements that the bid is usually a guess. There is also complaint that workmen, supposedly skilled craftsmen, fail to accomplish as much in one day as they did formerly. This slows down the work and increases the cost.

Another handicap is in the shortage of materials for housing, with a scarcity of almost every component from windows to bathtubs, from wiring to soil pipes. To give an advantage to builders of homes for veterans, priorities are issued for such material as is available. In order to accomplish this purpose, CPA is limiting and restricting applications for permission to build any commercial or industrial plant unless CPA is convinced that such construction is essential for the public welfare.

When CPA was created it had authority to approve applications up to \$1,000,000 and under this grant of discretion approval was given to a number of large-scale structures. Gradually the power of CPA was curtailed until it can approve an application for construction for only a few thousand dollars. This situation will continue deep into 1947 unless there is an out-pouring of building materials of all descriptions.

The extensive construction program of the State Board of Control and of the State Board of Higher Education has had to be postponed due to higher costs than prevailed when funds were apportioned for building expansion.

WILLAMETTE VALLEY PROJECT

War interrupted the progress on the Willamette Valley Project, after two reservoirs had been built (Cottage Grove and Fern Ridge), as materials and manpower were required for the immediate conflict. The remaining proposed dams were to be resumed after the war and were to provide employment for several thousand workers.

The Willamette Valley Project has been authorized by the Congress and appropriations made for the fiscal year 1947. At this point, following the adjournment of the Congress, President Truman issued an order freezing the greater part of public works appropriations which particularly affected the program in Oregon. This order has since been rescinded.

While the series of reservoirs are designed for improvement of navigation, stream purification, hydro-electric power and flood control, the most pressing need is the latter. A house-to-house canvass in the Valley by the Army Engineers reveals that the 1945 flood caused an estimated damage of \$9,500,000; two years earlier a flood resulted in \$5,000,000 damage.

But for the completion of the Cottage Grove and Fern Ridge Reservoirs there would have been an additional damage of \$1,500,000 —making the 1945 flood damage aggregate \$11,000,000. Aside from loss of life, livestock and general damage, these floods sweep away forever rich top soil of the farming lands of the Willamette Valley, the soil rushing to the Pacific Ocean in a chocolate colored sediment in the rivers. Livestock and farm buildings can be replaced, but the top soil wealth is an everlasting and irreparable loss to the economy of the state.

Each year's delay in the completion of the series of multi-purpose reservoirs is a constant threat of new floods, new damage and loss of land. In the past ten years the Port of Portland has dredged 11,000,000 tons out of the Willamette River and this does not account for the material that was not deposited but went on to the Columbia River and the sea. There have been 1,208 acres of fertile bottom lands permanently removed from cultivation because of bank cutting. The loss of top soil through erosion is estimated at 25 per cent of 54 per cent of cultivated land.

The paralyzing effect of President Truman's order extended beyond the Willamette Valley Project. It halted preliminary contracts for McNary Dam, (known earlier as Umatilla Dam), on Columbia River and held in abeyance river and harbor projects. In the "freeze" which also applied to the Reclamation Bureau, exceptions were made on two Oregon projects—Deschutes and Klamath—to enable these to be completed. In May, 1946, the first unit of the Deschutes project was thrown open and immediately there followed a building boom at Madras, Jefferson County, in the heart of the new reclamation unit. This initial unit contains 23,000 acres, divided into 307 farms. The Bureau of Reclamation has been permitted to proceed with the second unit of 27,000 acres to create 360 additional farms.

Strictly for veterans are 87 farms in the Tule Lake division of the Klamath Modoc project. These farms are valued at \$25,000 each "as is." The mechanics of selecting priorities, the investigation of the financial resources of applicants and other details are now being worked out by the Bureau of Reclamation.

A re-study of the Willamette Valley Project has caused the Army Engineers to amend part of the plans. Originally a dam would drown the little hamlet of Sweet Home, but with new industries moving into that area and the village itself destined to grow, the proposed dam has been abandoned and a reservoir on another site is planned. Also instead of a dam to impound the waters of McKenzie river, the Engineers propose building smaller dams on the tributaries. The new proposal has been submitted to the people interested, at public hearings in various communities, and now awaits the approval of Governor Earl Snell, as is required by the Flood Control Act.

From an employment viewpoint, the Valley Project and the McNary Dam are estimated at some 6,000,000 man-days at the site. These jobs constitute part of the backlog to be utilized later.

The Oregon Congressional Delegation, voicing the protests of the people of the State, against the stoppage of federal public works by the "freeze" succeeded in "unfreezing" the funds appropriated for the Willamette Valley, McNary Dam and other projects and these will now be carried forward without the loss of a year, as would have been the case under the presidential order.

The transition period is opening a new era for the workman on heavy construction and in the forests.

In the program of the Army Engineers (McNary Dam and the Willamette Valley Project), the old-time contractor's camp of shacks covered with tar paper will be superseded by neat, attractive dwelling units with utilities, stores, services and schools. At each of the damsites the government will expend between \$400,000 and \$600,000 for these villages. Workers with families will have complete homes adjacent to the job and educational facilities for the children.

It is worthy of note that each reservoir will have a recreational area with fireplaces, benches, electric lights and utilities. On the two completed dams, Cottage Grove and Fern Ridge, the public is flocking to them for boating, bathing, fishing and picnicking. Statistics for one dam (Cottage Grove) in 1945 show the recreational area was visited by 8,358 automobiles, 30,151 persons, 3,408 bathers, 2,181 fishermen, 562 boats. Hunters in the area shot deer, pheasants and wildcats.

One of the handicaps in employing men in logging and lumbering industries has been the refusal of workmen to go to remote logging operations where there were no accommodations for their families and little for themselves. Federal government has stepped in to ameliorate this situation by selling to operators several hundred temporary houses built for civilian war workers in the Portland area. This is the first instance of the government disposing of these units to private parties. And this was to augment as quickly as possible the lumber necessary for veterans' houses—just as the government is spending millions of dollars for access roads.

INDUSTRIAL DEVELOPMENT

As an aftermath of the war (which Congress has not yet declared ended), Oregon is strengthening itself industrially and is building a change in its economy on a solid foundation. In addition to existing industries, all of which are expanding, there has been an infusion of new blood, new money, new pay rolls and increased purchasing power.

Business opportunities in this state are being recognized by concerns of national scope which are showing their faith and confidence in the future of Oregon by the investment of sums of money aggregating in the total of millions of dollars. These out-state companies

and corporations are acquiring property for sites, are constructing buildings (as materials are available and as approved by CPA), and are planning sinking their roots firmly into the business life of the commonwealth.

This out-state invasion of well-financed companies has as yet been recognized by only a small portion of the people. There has been no beating of tom-toms, no splurge of publicity accompanying the arrival of a new manufacturing industry. Agents of national companies enter the state quietly, survey the situation and acquire acreage before the advent of a new industry is announced.

This has been the pattern in a score of instances. Other companies are seriously considering locating a branch in Oregon. In the past month, for example, a scout has been looking for a 300-acre site for a southern manufacturing company which is favorably impressed with the possibilities and raw materials of the state.

Of thirty or more out-state major companies which have come to Oregon since V-J Day these newcomers have invested \$17,000,000. Their investment (not including cost of site or machinery installation) is for construction alone, and ranges from \$3,000,000 down to \$100,000 each, with two at \$1,500,000 and two at an even million dollars.

No subsidy has been offered by the state nor political subdivision to induce these out-state companies to locate; no free sites, no rent concessions, no tax reductions. The companies have selected Oregon because of climatic advantages (no extremes in summer or winter); an unlimited supply of low-priced electric power and inexhaustible water; an abundant and intelligent labor pool, adequate resources of such raw materials as each industry requires; friendly and cooperative labor leaders and an expanding market which parallels the increasing population of Oregon and its neighboring states, and efficient transportation facilities—rail, water, highways and aviation.

Certain new arrivals have an eye on the potential possibilities of the Pacific basin—the great markets of the Philippines, China, Australia, the Malay States and Japan, reached by merchant ships dispatched from the Columbia river. The markets of the Orient, closed during the war years except for war materials, are gradually opening up.

Prewar steamship lines are resuming operations and cargoes are being dispatched to Italy, France, Norway, Spain, Portugal, India, New Zealand, Cuba and Latin America as well as China, Japan, the Philippines and Australia. Principal cargoes have been coal, wheat and flour and lumber.

Branches of large concerns have come from Pennsylvania, Minnesota, California, Washington and Idaho, specifically. Others are national advertisers with branches in many eastern cities, their

products being found upon the shelves of groceries, drug stores or used by other manufacturing industries. One new industry causes another, a satellite, to establish itself where it can supply the first with a product that is essential to the manufacturing process. For example, the expansion of the softwood plywood industry has induced an eastern concern to acquire a seven acre site for a \$200,000 plant to manufacture formaldehyde, an ingredient of the glue used in the plywood presses. On the coming of a specialized creamery results in the production of a penicillin plant. Or manufacture of dextrose and starch results in building of warehouses for storage of potatoes in other parts of the state.

Each new comer is looking to Oregon's raw materials, to develop and manufacture materials which heretofore, in many instances, have been waste.

In this group of new business concerns are hundreds who are engaging in activities formerly too small to be listed as industries; other hundreds are competing with old established institutions.

An infinite variety of new industries are locating in the state.

Oregon is one of the principal sources of batteries for motor cars and trucks. Formerly there were several manufacturers of battery separators, made chiefly from Port Orford cedar. There are now three large companies, two nationally known, who have established branches to produce the complete battery. One of the new companies employing 150 men, builds all of the batteries for a famous mail-order house. Another, now under construction, is a \$350,000 plant and will make batteries with a Douglas fir separator. The third has purchased a site in Portland and will invest \$500,000 in its construction of a plant, which is one of several branches scattered throughout the country.

An eastern concern which was the major manufacturer of kitchen cabinets now has a competitor in the Willamette Valley who is producing and shipping \$500,000 of these household facilities each month. It is a new industry for Oregon and brings in \$6,000,000 a year. The material used is grown and processed in Oregon.

Radio cabinets sold by two nationally known manufacturers in the east are supplied by wood-working plants in this state. One company in the Willamette Valley is working on an order for 10,000 cabinets and another company at Coos Bay has an equally large contract. The cabinets are knocked-down and reassembled by the radio concerns in the east.

To meet the housing shortage, five plants are producing prefabricated houses. One plant ships its prefabs knocked-down to Minneapolis; another has orders on the books for 700 units from out-state; another has orders with down payments for 800 and another is disposing of its units in the Willamette Valley.

A chemical industry is now constructing a special plant to produce DDT, the first plant of its kind west of the Rocky Mountains. Other new chemical enterprises are manufacturing weed-killers and insecticides.

Two plants are being built to manufacture dextrose, glucose and starch, representing more than \$1,500,000 investment.

A dozen plants have started to make concrete blocks, the materials being pumice from Central Oregon and Portland cement. One plant is the largest in the Pacific Northwest. Pumice, which is unlimited in quantity, is also being exported by the carload to block manufacturers in California.

In Astoria area new enterprises consist of tanning shark hides, frozen oyster stew (requiring 1,800 gallons of milk daily), creamed salmon and tuna and the extraction of Vitamin A from fish waste and the oil from eels.

Synthetic resins, also something new, and formaldehyde, are being produced in the Willamette Valley.

New manufacturers of furniture are establishing themselves and cut-up mills are processing furniture parts and shipping them east. Mills are taking odds and ends of lumber and manufacturing toys and souvenirs from these bits of waste which formerly went into the burner.

Electrical furnaces and household freezers formerly imported, are being produced by established firms which manufactured other items before the war.

The popularity of the venetian blind has launched a dozen or more factories to manufacture these from Port Orford cedar or of metal strips.

Twenty-five thousand tons of ammonium sulphate, needed by farmers have been recently produced at the alumina-plant near Salem. This plant, federally financed, has extracted high-grade alumina from native clays, an experiment for which it was originally designed.

Other new industries are the manufacture of household articles from aluminum; canning of turkey and chickens and mushrooms; manufacture of shoe grease, adhesives from slaughterhouse waste, carbonated beverages, patented shingles, penicillin, presto-logs, plastics, pleasure boats, distillery and wineries, fiber-perlite wall boards, several manufacturers of miniature airplanes, water-softeners, vegetable boxes and crates from plywood cores, paint and varnish, asphalt plants, a national seed distributing company, "slick" paper for national periodicals, silica sand, cedarwood oil for high grade soap, baby footwear, facial lotions, doll furniture, women's wear, clothing for men and boys, artificial eyes, woolen sports shirts.

EXPANDING FOOD PROCESSING INDUSTRY

Notable in the development program is the food processing industry.

In 1946 more than \$7,000,000 has been invested in new plants. Most of these new establishments are still under construction, not being able to complete the buildings or install equipment in time to handle the 1946 crop of fruits and vegetables.

There are approximately 160 food processing plants in the state, ranging from canneries to quick-freeze and cold pack. These provide employment for some 25,000 workers, about 60 per cent being women, who build up credits in the unemployment fund on which they draw after the season closes.

Formerly food processing plants were concentrated in the Willamette Valley, but this industry is now spreading into eastern and southern Oregon. There are immense plants in Umatilla county, where the packers specialize in peas; in Malheur county and in Klamath county.

Trainloads of Oregon vegetables—peas, beans and corn—are dispatched to the manufacturers of soups in the east. Large grocery chains contract for canned goods. Oregon fruits compose the greater part of the fruit cocktails. Three concerns at The Dalles have processed 22,500 barrels of cherries this season. Shortage of sugar prevented a larger pack.

Notwithstanding higher prices for field workers for various crops, such as cherries, prunes, berries, nuts, etc., growers were unable to recruit all the pickers required and there was considerable loss in crops left to waste. Food processors, in turn, were handicapped by inability to obtain sufficient containers—barrels—for their wants, and to employ workers. Hop growers made appeals with indifferent success. There was work for all who felt inclined to work. Thousands of jobs went begging. Hundreds of Mexican nationals were imported; some prisoners of war were used, but there was still an unfilled demand for field workers and canneries ran short handed.

Since Nathaniel Wyeth, more than a century ago, began salting salmon on Columbia river, the processing of seafood has been an important item in this state. This business now gives year-round employment to thousands of workers from fishermen catching salmon, tuna, soupfin sharks and bottom fish, to women earning high wages picking crabmeat in canneries for the market.

When canneries confined their efforts to salmon, this was a seasonal occupation, but the discovery of albacore tuna off the coast enabled the packers to operate all year. Latterly they have added bottom fish to their output. The catching of soup-fin sharks for their vitamin-laden livers (25 per cent of a shark's weight is liver) has become big business.

Receiving stations have been located on the coast at Newport and Coos Bay by Astoria canneries and two California companies specializing in crabmeat, smoked and kippered salmon and smoked oysters have recently come to Oregon.

A laboratory at Astoria has developed new methods of preparing seafood with the result that additional new industries have been successfully launched.

AVIATION

In the State's development program, attention is being given to aviation and its possibilities for expanding markets.

Although aviation is in its infancy, CAA is authority for the statement that there are 15,000 certified pilots in Oregon. There are 1,100 private planes with an estimated value of \$2,500,000. Approximately 125 airfields are now ready for business, 58 being planned for a state, county or municipal system.

Investment in existing airfields and airports is enormous, as the federal government expended millions of dollars in constructing airports at Klamath Falls, Redmond, Pendleton, Tillamook, Corvallis, Coos Bay, Newport, Seaside, Portland, etc. No figures have been released by the government, but it is conjectured that the sum was in excess of \$30,000,000. These airports are now surplus and are available under certain conditions to the state, counties and municipalities. They are expensive to maintain.

Interest is shown in what promises to be a coming aviation age by the several score of private fields where single individuals and small companies have made substantial investments of capital in the preparation of landing fields. This is an activity that appeals to many veterans.

The State Board of Aeronautics has issued licenses for flying instruction and each of these schools is well patronized.

Fliers embrace almost every category from professional men and ex-G. I.'s to farmers. The statement has been made that 60 per cent of the planes east of the Cascade Mountains are operated by flying farmers. The farmers utilize the planes for dusting, seeding, looking after their livestock or crops, for hunting predatory animals, inspecting various sections of their ranch, going to town to market and for recreational purposes. Aviation statistics declare that the safest age for fliers is in the 50 to 55 age group and the most hazardous age for fliers is between 18 and 27 years. Planes are likewise used extensively in the Willamette Valley in dusting crops.

The Congress has voted a sum, spread over seven years, to encourage and assist in aviation facilities. CAA has allocated from this fund \$7,187,000 to the State of Oregon. This money, however,

must be matched but as yet there are no funds available from the state for meeting the requirements stipulated by CAA. In any event, no federal money can be used on a private airfield.

Greatest field for development and utilization of the airplane commercially (aside from flying passengers), will center west of the Cascades. The development will come from those communities which produce specialties that can afford the rates of air-express. Eventually, of course, rates will be reduced and aviation companies are hoping for the day when the charge will be 10 cents per air-mile—which for the immediate future is beyond expectation.

A start in building commercial air-express business has been undertaken in western Oregon and it is in this region that development is believed will come rapidly. Already pears have been shipped from Medford and Ashland; orchids from Eugene; flowers and ferns from the Valley; oysters and shellfish from the coast; salmon from Astoria; strawberries from Salem; cherries from The Dalles; turkey poults from Valley towns; crawfish from Portland and pheasants.

Special packaging is required for fruits, flowers and vegetables. Light containers are being devised—some from aluminum—and when packed with dry ice reduce spoilage to a minimum. Oregon lettuce and peas can be laid down in New York quicker and in superior condition and with less waste than the New York farmer requires to bring his produce to market. The advent of the air-express will open new outlets for Oregon growers in Chicago, Washington, D. C., Philadelphia, Baltimore and New York, enabling the Oregon product to reach those markets within 24 hours.

In reverse, Portland merchants are bringing in by air, women's dresses from the eastern manufacturers at a nominal cost for the service as these dresses weigh very little. Hats, too, are imported and there have been thousands of nylon hose expressed to dealers and to punchboard operators.

Oregon is taking its first steps in placing commercial aviation on a sound basis.

What may be regarded as a little brother of aviation is a new industry developing in Portland. This is the manufacture of miniature airplanes and it has a sales volume in excess of a million dollars a year. These factories make model planes equipped with a minute power plant and have remote control; others are of the flying toy type. Portland is regarded as the chief production city in the country for these flying models and toys.

SUBJECTS FOR ADOPTION

Present city boundaries of many communities will have to be enlarged in the near future to embrace extensive subdivisions. As at present planned and plotted, most of these subdivisions will be in the fringe area adjoining municipalities. There is no control at present over "fringe" districts and a measure will be introduced at the coming session of the Oregon legislature to impose certain regulations. The "fringe" is just outside city limits and neither city nor county has any authority over the area.

Small home owners have left the municipality and built in this "no-man's land" in the belief that taxes will be less; that they need not pay for police and fire protection nor street lights, nor be responsible for a share of the operating expenses of a city. Some of the "fringes" have neither water service nor sewer. Dwellers in the "fringe", as a rule, earn their living by working in the city but refuse to consider themselves a part of the municipality.

Owing to the pressure for additional housing, which cannot be satisfied with the limited and isolated vacant lots within the town boundaries, there is a current movement to open subdivisions outside the city limits. Raw land is being acquired by developers and platted into building sites, with more or less space for a yard or lawn, depending on the imagination and artistic tastes of the developers and the price asked for a building site or dwelling and site.

In the Portland area the developers have leaped across East 82nd Street, the eastern city limit, and are building or preparing to build solidly a mile or more eastward. These are large subdivisions, to be equipped with utilities, electricity, water and sewers, streets and sidewalks. Some subdivisions will be landscaped as completely as a restricted residential district within Portland boundaries.

West of Portland, in Washington county, but scarcely 20 minutes from the downtown section, farms have been purchased and this raw land is to be carved into home sites by Commonwealth, Inc., and a Kaiser subsidiary and 3,000 dwellings constructed by these two operations (2,000 by Commonwealth, Inc., which calls its subdivision "Cedar Hill," and 1,000 units by Kaiser). These will represent an investment of \$35,000,000 and will have "everything" that a city dweller demands. The sewer system of Cedar Hills has been acquired from Camp Abbot, the military cantonment in central Oregon. Both developments being mid-way between Portland and Hillsboro, eventually one or the other municipality will absorb them —the Kaiser subdivision is expected to be taken over by Hillsboro. There is also a 125 unit subdivision on the edge of Hillsboro.

Eugene will find a \$6,000,000 subdivision outside of its boundaries, with streets and utilities. Pendleton has another, also Albany, Independence, The Dalles, Dallas, Salem, Corvallis and Agate Beach, two miles from Newport city limits. This does not comprise all of the new land subdivisions, but it is indicative.

According to blueprints, these subdivisions, which will be on the "fringe" of municipalities, will not be the hodge-podge that now make up the fringe of so many cities, and which the legislature may attempt to control through zoning. The subdivisions enumerated will conform to the street pattern of the near-by cities and can be included when and if there is a public sentiment to expand the boundaries.

These subdivisions will mean increased valuation, the difference between raw land and improved property, and will also mean expansion of such facilities as telephones, gas and electric power, which in turn will represent additional taxes to the state from the utilities.

MINING

An outstanding discovery of the past two years has been the finding of bauxite in Columbia and Washington counties, with occurrences in Polk and Marion counties. As far as known, no other occurrences of bauxite exist elsewhere on the Pacific Coast. That this may lead to a new industry is the confident prediction of scientists familiar with the subject. A multi-million dollar corporation is sufficiently intrigued to send two crews testing the bauxite.

As this bauxite is under examination, the Salem alumina-fromclay plant, in which the Defense Plant Corporation invested \$4,000,000 designed to produce alumina from clay on an experimental basis, has had excellent results with clay from Castle Rock, Washington. Most of the time, however, the plant has been producing ammonium sulphate fertilizer and UNRRA has negotiated for many thousands of tons to be exported to China. Clays from Molalla and Hobart Butte have not yet been processed.

In the past year several major oil companies have sought diligently for oil and have driven a number of holes to an average depth of 7,000 feet. To date they have found nothing, but they are giving likely locations a thorough test.

The Electro-Chemical and Electro-Metallurgical Laboratory of the U. S. Bureau of Mines, at Albany, has been conducting research on a number of subjects, and particularly the black sands on the coast of Coos County. Results from the black sands give promise of new industries.

SANITATION

One of the earliest activities of the Governor's Commission was a campaign for purification of rivers and proper disposal of sewage. There are now 69 municipalities which are in various stages of improving sewer systems and 63 propose treatment plants.

Estimated cost of the sewers is \$17,506,797; estimated cost of treatment plants, \$6,119,990. Nineteen municipalities have voted bonds in the sum of \$14,955,900 and 35 have accumulated sinking funds of \$2,324,144.

Lack of materials is delaying launching such projects as have already been engineered. When the municipalities complete their share of the anti-pollution program and the industrial plants which empty their waste into the rivers find some other method of disposal, the Willamette river and its tributaries will once more afford recreational areas.

ACKNOWLEDGMENT

The Governor's Commission wishes to express its appreciation to the following for their assistance and cooperation, as the list gives an idea of the Commission's many activities.

Unemployment Compensation Commission; Municipal officers in charge of issuing building permits; county assessors; County School Superintendents; Housing Authorities; Sanitarians of the State Sanitary Board; Contractors; Architects; Realtors; Bankers; Farmers; Labor Union Officials; Chambers of Commerce; U. S. Army Engineers; Bonneville Power Administration; Rural Electrification Administration; John D. Small of Civilian Production Administration; Bureau of Reclamation; State Highway Commission; State Board of Control; State Board of Higher Education; Oregon Congressional Delegation; Congressional Ways and Means Committee; Telephone, Gas and Power Utilities; Housing Expediter Wilson Wyatt; Secretary of Agriculture, Clinton P. Anderson; Secretary of the Interior, Julius A. Krug; Freight and Tax Departments of the Union Pacific and Southern Pacific; Committee on County Zoning; Committee on Tourist Business; Public Service Commissioner; Department of Geology and Mineral Industries; Manufacturers of prefabricated houses; Food Processors; Mayors and City Commissioners; State Board of Aeronautics; U. S. Forest Service; State Forest Service; O & C Land Grant Administration; League of Oregon Cities; U. S. Grazing Service; U. S. Employment Service; Interim Committee on Tax Study; State Department of Agriculture; Port of Portland Commission; United States Navy Department; U. S.
